Question. Can anyone give me an example of a topological space X that is not Noetherian but is a subspace of a Noetherian space? A: The most obvious example is $X=\omega$, the first countable ordinal. It's not Noetherian, but a countable subspace of a Noetherian space. Actually, this can be done with any ordinal, e.g. $X=\omega^\omega$, which is again Noetherian but not Noetherian. This is also an elementary example. Let $T=\omega\times\omega$ be the second countable ordinal. Consider the well-ordering $ 82157476af
